Starting Treatment Services Prior to Receiving ADES Screening and Referral Report

Clients may begin treatment prior to receiving their ADES (or equivalent if coming from somewhere other than Jackson County), but must acknowledge that this is a courtesy we extend to our clients and agreement with the following conditions is a requirement to take advantage of this courtesy:

- Client may not attend a DUII group more frequently than one time per week and must attend for a minimum of four consecutive weeks (until ADES has been received).
- If client opts to begin treatment prior to completing the ADES and completes all required groups, client must continue to meet at least once per month with their primary counselor and comply with the urinalysis guidelines for DUII mandated clients (at a minimum once within every 14 days, and additional random UAs as requested by agency/counselor).
- Based on the results of the ADES, client may be required to participate in a higher level of services than was originally assessed at Kolpia. If the ADES is received and the client is required to participate at a higher level of service than assessed at Kolpia, a new Service and Support Plan will be required, and client will be responsible for any associated charges, as well as full compliance at the new level of services.
- By signing, client acknowledges they have fully read and understand these conditions, and that the ultimate responsibility of their program, treatment, and any consequences for noncompliance lies solely with the client.
